

Binding procedure Evo 550

Bind the drone

1. A reset button is located at the rear of the zoopa Q Evo 550. It's about 3 cm next (left) to the USB port. You can feel it with the index finger. Press and hold this button while powering the Evo 550 with the LiPo battery. If you now look closely inside of the Evo 550, you will notice an orange blinking of the receiver. That means that the model is in binding mode.
2. Turn on the radio with the bind button pressed. After a few seconds, the blinking will turn steady. Binding process complete!
